

Get the impact of colour on your print output - not your printing budget

OKI Printing Solutions lets you control and monitor the colour usage of selected printers and MFPs by defining who can print and what gets printed.

Colour Access Policy Manager (CAPM) makes printing in colour cost effective

You've already decided that the advantages of in-house colour printing would greatly benefit your business but misgivings over the possibility of abuse might be keeping you from replacing your monochrome devices and providing open access to colour printers and colour MFPs.

Using colour printers from OKI Printing solutions equipped with the unique CAPM solution can help you maximise your ROI and get great professional colour output only when you need it.

Perfect for small workgroups and big business

The CAPM solution suits the needs of any environment. It's easy enough for small workgroups to use yet powerful enough for even enterprise applications.

CAPM makes it easy to establish the rules

Print customer-facing documents such as corporate marketing materials, presentations, contracts and signage in colour. Force reference material and internal reports to print in black and white. Reject personal documents such as pictures and non-approved web pages.

CAPM lets you assign access levels by user log-in name PC/server name, application, file name, and URLs (Web sites). Once your policy is configured in the printer CAPM determines how, or if, any incoming jobs will print.

This is the first solution of its kind to control the printing content and documents from Internet sites. With CAPM, you can select which sites or addresses will print in colour or black & white and which will be blocked from printing.

Track printer usage to create and affirm policies

CAPM also gives you the ability to acquire job logs from your OKI Printing Solutions colour printers, enabling you to monitor and analyse how the devices are being used, everything from user name to application to the number of colour or black & white pages printed. It's data you can use to develop new policies or judge the effectiveness of your existing policies.

Highlights:

- **Leverage colour controls built into selected Colour printers and MFPs from OKI Printing Solutions**
- **Define who and what can print in colour, black & white, or not at all**
- **Control printing of content from specific URLs (Web sites)**
- **Limit printing of Windows®, Mac®, Linux and UNIX® workstations**
- **Easy to install, to review job logs, establish and revise policies**
- **No network server or additional client software required**
- **Policies are password-protected for added security**
